Extremely powerful liposolubilized derivative of vitamin C in vitamin F

Vitamin C is a powerful antioxidant that clears skin tone and reduces the signs of aging. Ascorbyltetraisopalmitate is a liposoluble derivative of vitamin C which can be used in high concentrations without particular inconvenience. It is one of the most stable derivatives of vitamin C, but since it is a derivative, its potency will not be directly comparable to that of pure ascorbic acid. It is proposed in this formula in the form of an oil combined with vitamin F, also known as "essential fatty acids". In addition to the great benefits of vitamin C in its pure form, ascorbyl tetraisopalmitate has been shown to have a special effect on skin lightening.

Vitamin C applied topically offers multiple benefits to the skin. However, the many forms of vitamin C and vitamin C formulas sold on the market can confuse the consumer.

Vitamin F nourishes, protects and acts as a skin conditioning agent. It is ideally suited for the treatment of dry, stressed and sensitive skin, helps the skin to rebuild itself and maintain its healthy structures and natural features.

In addition, Vitamine F is a powerful hair conditioner, improving detangling and has shown its protective effect.

Vitamin F contains naturally occurring polyunsaturated essential fatty acids from safflower oil with a particularly high linoleic acid content.

Note: Packaged in ultraviolet-proof packaging.

HOW TO USE

Apply a few drops all over the face in the morning and / or evening.

Avoid sun exposure after use. Not recommended for sensitive and reactive skin

PROPERTIES:

- **Brightness of the complexion - Reduces brown spots**
- **Peeling effect: Exfoliating: Eliminates dead cells,**
- **Boost the production of collagen and elastin**
- **Regenerating: smoothes the skin, attenuates fine lines**
- **Tighten the dilated pores**

COMPOSITION : Ascorbyltetraisopalmitate, Linoleic Acid, Linolenic Acid

- **Without perfumes or synthetic dyes**
- **Without preservatives**
- **GMO-free (genetically modified organisms)**
- **No ionizing treatments**
